FOREWORD

Section 31 of Disaster Management (DM) Act 2005 makes it mandatory to have a District Disaster Management Plan (DDMP) for every district. The District Disaster Management Plan-2018 of Bhadrak district was prepared as per the template developed by Odisha State Disaster Management Authority (OSDMA) with necessary support of Blocks, district level line departments and other stakeholders. The DDMP was prepared in two volumes i.e. Volume-I and Volume-II. The Volume-I of DDMP included the detail plan and Volume-II included the Statistical Information, Maps, Contact Numbers, IDRN and Annexure.

Section 31 (4) of the DM Act, 2005 calls for review and updating of the DDMP on annual basis. According to the above provisions of DM Act-2005, a consultation meeting was held on 14 .03 .2018 including all members of DDMA, nodal officers of all key line departments, local authorities and other stakeholders. The DDMP has been subsequently updated taking into active consideration of inputs provided by above members in consultation meeting, changing scenario of occurrences of disasters in the district and lessons learnt during last one year in implementation of DDMP-2018.

As per the guidelines issued by NDMA/SRC from time to time and inputs suggested by OSDMA the DDMP-2019 includes new critical aspects like 1) Schools Safety; 2) Climate Change; 3) Details of Museums, Cultural Heritage Sites and Precincts; 4) Details and Safety measures for Child Care Institutions; 5) embankment details.

Apart from the above aspects, the district has included some district specific aspects like escape point analysis and vulnerability index calculation in respect of cyclone, Flood & Tsunami to find out the relative vulnerability ranking of the blocks in the DDMP-2019.

The revised DDMP-2019 will not only adhere to the legal requirements postulated under the DM Act but also strengthens the institutional mechanism of disaster management in the district. The implementation of DDMP-2019 by concerned stakeholders in true spirit will make a paradigm shift in management of disasters from reactive approach of rescue, relief, recovery and rehabilitation & reconstruction to the pro-active approach of planning, preparedness and prevention.

Collector-cum-Chairperson,
DDMA, Bhadrak

CHAPTER – 1

INTRODUCTION

Under the DM Act 2005, it is mandatory on the part of District Disaster Management Authority (DDMA) to adopt a continuous and integrated process of planning, organizing, coordinating and implementing measures which are necessary and expedient for prevention as well as mitigation of disasters. These processes are to be incorporated in the developmental plans of the different departments and preparedness to meet the disaster and relief, rescue and rehabilitation thereafter, so as to minimize the loss to be suffered by the communities and are to be documented so that it is handy and accessible to the general public.

Section 31 of Disaster Management Act 2005 (DM Act) makes it mandatory to have a disaster management plan (DDMP) for every district. The DDMP includes Hazard, Vulnerability, Capacity and Risk Assessment (HVCRA), prevention, mitigation, preparedness measures, response plan and procedures.

1.1 Aims and Objectives of the DDMP:

The aims and Objectives of the DDMP are as follows:

- i. To identify the areas vulnerable to major types of the hazards in the district.
- ii. To adopt proactive measures at district level by all the Govt. departments and other agencies to prevent disaster and mitigate its effects.

CHAPTER-2

DISTRICT PROFILE

2.1 History & Location:

Bhadrak is one of the premier districts of Odisha with a rich heritage and history of its own. As per the legend, the district has derived its name from the Goddess Bhadrakali whose temple stands on the bank of the river Salandi. The earliest inscription about the district which is traced to be of 3rd Century A.D shows that the present Bhadrakali temple was popularly known as “Parna Devati” at that time.

Bhadrak was a Sub-division of Balasore war district prior to its declaration as district vide Govt. of Odisha notification No. DRC -44/93-14218 Dated 27.03.1993; it came into existence on 01.04.1993. The district is bounded by Balasore district on the North, Jajpur district and River Baitarani on the South, Kendujhar district on the West and Bay of Bengal and Kendrapara district on the East.

The legendary history of Bhadrak district dates back to the puranas when Odisha achieved thriving maritime and agrarian prosperity. As far as the history is concerned, King Mukundadev was the last sovereign indigenous ruler of Bhadrak. He was killed by the Afghan ruler of Bengal in a fierce battle held at Guhiratikiri near Dhamnagar. The Muslims not only destroyed a number of Hindu temples and idols, but also setup a number of Muslim settlements in and around Bhadrak and Dhamnagar in the year 1575 following the discomfiture of the Afghans under Usman at the hand of Raja Man Singh.

During the Mughal period, Bhadrak district survived as a Subba under the Nawabs of Bengal when the Majestic Mughals were diminished from the political scenario of Bhadrak district. In course of time, Bhadrak district had passed into different hands and colonized by different dynasties till the British occupied the entire region of Odisha.

Since Independence the history of Bhadrak has been the history of multifarious progress in the field of education, industry, agriculture, trade and commerce. A birth place of several luminaries of Odisha the district reckoned to be one of the leading districts of the State.

There are many historical places and monuments which reflects the past glory of the district. Among others, Baba Akhandalamani Temple on the bank of river Baitarani is the abode of lord Shiva. The artistic carving of the temple deserves special worth to the visitors.

The climate of the district is generally hot and humid all the year around. Being a coastal district winds are stronger during summer and South-west monsoon season. But there

is light to moderate winds during post-monsoon and winter season. The district is directly on the track of most of the cyclonic storms and depression.

Surrounded by green paddy fields, enriched by the rivers like Salandi, Gumati, Baitarani, Kanshbansha, affluent in ancient times by maritime trade and commerce transacted through the ports such as Churamani, Chandbali and hallowed by a galaxy of literary luminaries and gallant freedom fighters, Bhadrak has been a place with a significant difference that enlightens, elevates and extends the horizon of people's consciousness. It evokes a sense of glorious past, presents a persevering present and points to a fascinating future.

Bhadrak district is one of the eastern located coastal districts of Odisha. It lies between latitudes 20°43' to 21°13' north and 86°16' to 87° east longitudes.

2.2 Administrative Setup:

Bhadrak District covers an area of 2505 square kilometres. With regard to geographical area, the district stands 27th rank among the 30 districts of Odisha but as regards population it ranks 12. It is linked with the state headquarters Bhubaneswar by both road and rail with a distance of 142 Kms.

Collector and District Magistrate is the administrative head the district. For smooth running of administration, he is assisted by Additional District Magistrate, Sub-Collectors, Block Development Officers, Tahasildars, Deputy Collectors, and other Officers. Although district level Officers of other departments are in the control of their respective departments, the Collector being the administrative head of the district, exercises general supervision over them.

Bhadrak District is constituted of one Sub-Division with the same name. A Sub-Collector is in charge of the Sub-Division. For the convenience of revenue administration, the district is divided into 7 tahasils namely Bonth, Bhadrak, Dhamanagar, Chandbali, Tihidi, Basudevpur and Bhandaripokhari with one Tahasildar in charge of the tahasil. For development of rural areas consisting of 1370 Revenue villages in 218 Gram Panchayats, the district is divided into 7 Community Development Blocks with one Block Development Officer in charge of each Block. For maintenance of law and order, the district is divided into 18 Police Stations such as Agarpada, Bonth, Bhadrak (Rural), Dhamanagar, Dhusuri, Bhandaripokhari, Tihidi, Chandabali, Bansada, Dhamara Marine, Basudevpur, Naikanidihi,

Bhadrak (Town), Puruna Bazar, Chudamani Marine, Kasia Marine and Energy Police Station and Dhamara port P.S.

Within the district there are 4 statutory towns such as Bhadrak Municipality, Basudevpur Municipality, Dhamnagar NAC and Chandabali NAC. In order to look after the developmental activities in the urban areas of the district, one Executive Officer for each town has been appointed. Besides one village, Erei declared as non-statutory town i.e. Census towns during 2011 census. The administrative set up of the district can be briefed as follows:

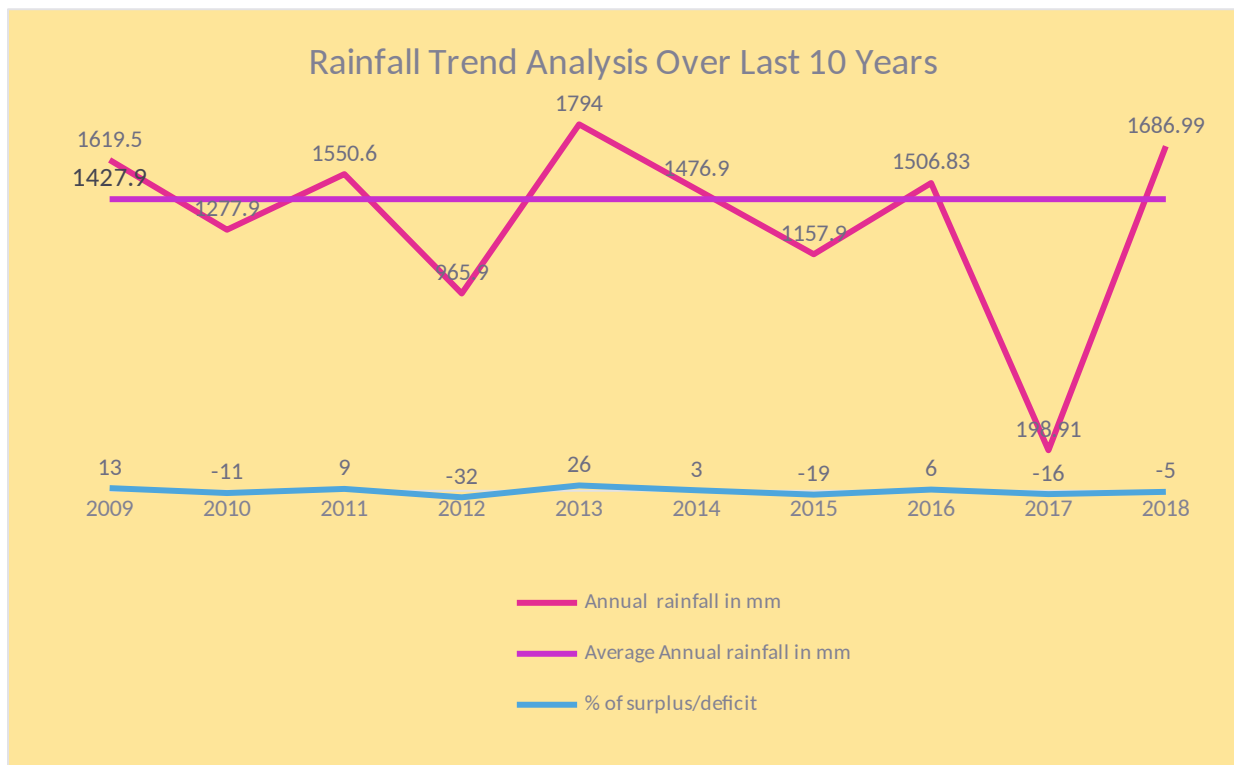

No. of Subdivision	No. of Tahasil	No. of Municipalities	No. of NACs	No. of Blocks	No. of Police Stations	No. of G.P.	No. of R.I. circles	Total No. Revenue of Villages	No. of Parliamentary Constituency	No. of Assembly Constituency

2.3 Climate & Rain fall:

Being a coastal district lying between the Bay of Bengal and the north-eastern corner of the Deccan plateau, the climate of this district is characterised by lesser extremes of temperature and high humidity all the year around. The winter season from December to February is followed by the hot season from March to May. During summer the mean daily maximum temperature is 36.4°C and the mean daily minimum temperature is 24.6°C. During winter the mean daily maximum temperature is about 27°C and the mean daily minimum temperature is about 14.0°C. The highest maximum temperature ever recorded at Chandbali was 46.7°C on 12 June 1942. The lowest minimum temperature ever recorded at Chandbali was 5.1°C on 14 January 1989. The period from June to September constitutes the southwest monsoon season. October and November constitute the post-monsoon season.

The average annual rainfall in the district is 1427.9 mm. In general, rainfall decreases from the coastal region towards the interior. Considering the district as a whole, August is the month with the heaviest rainfall. About 71% of the annual rainfall is received during southwest monsoon months, i.e. June to September.

The district is directly on the tracks of most of the cyclonic storms and depressions which form in the head of the Bay of Bengal in the monsoon season and cross the Odisha coast. These cause widespread heavy rain and strong winds. A few of the storms and depressions in the post monsoon season also affect the district.

2.4 Geography:

Odisha is a part of the peninsular shield, one of the oldest and most stable land mass in the world. By and large it is underlain by pre-Cambrian rocks. About 25% of the state is constituted of phenomozoic rocks, Quaternary formation & the recent to sub-recent alluvium. The last is primarily confined to the coastal plain of which this district forms a part. Hence its geological formation could be best described as gift of some major rivers which have brought silt from their catchment basins and have re-claimed this area from the depth of Bay of Bengal. Hence the rivers like Budhabalanga, Salandi & Baitarani are responsible for its birth and growth of this huge alluvium depth. Though the coastal plain can otherwise be called as river delta but rivers like Salandi, Baitarani have failed to develop true deltaic characteristics as far as shape is concerned because of attrition of coast line attributed to strong offshore current which moves from Chennai to the Andhra coast that passes through Odisha coast. As indicated earlier this District forms a part of coastal plain –one of the three broad regions to which Odisha has been divided physio-graphically. According to location the coastal plain can be divided into the following sub-regions:

- The north coastal plains- The delta of Subarnrekha and Budhabalanga upto river Baitarani.
- The middle coastal plain.

c) The southern coastal plain.

By location this district forms part of the north coastal plain made by deposits of its half a dozen rivers including the major rivers like Salandi & Baitrani. As per as the configuration this can be divided into two zones which runs parallel to the shore line. They are:

- i) The salt tract along the coast.
- ii) The arable tract or rice country

The salt tract:

This salt tract is a narrow belt which stretches just beyond the shore line for about 3.00 to 6.00 Klm. inland. In many places it is impregnated with salt & thus unfit for agriculture. A number of sluggish and brackish streams make the area difficult to traverse. This salt tract towards the sea shore gives way to sand which have formed due to recession of the sea & upliftment of coast. Some bushy trees have grown here & there in clumps which dots the salt tract.

The arable tract

The salt tract merges into vast plain i.e. the large expanse of monotonous rice land broken only by old abandoned high ridges of old and moribund rivers, non-occupied by human habitations. These sites are normally not prone to inundation during high flood. However, Salandi and Baitarani have formed steep embankments which are breached during high floods inundating vast areas of Dhamnagar, Tihidi and Chandabali Blocks causing heavy damage to roads, building & standing crop. Part of this tract are protected from flood and irrigated by gravity canals from Salandi and Baitarani rivers. This part is agriculturally very productive.

The coast line of the district is about 50Km which is concave to the Bay of Bengal in contrast to bulging out coast line in the centre and south. Due to this peculiar shape the retreating monsoon wind that mostly travel over the landmass in rest of the state, collect some moisture from this concave coastline & provides some rainfall to the district.

2.5 Topography:

The Soil of the district falls under red laterite, deltaic alluvial & Saline and seems to be heterogeneous in colour, texture and exhibits other physiochemical characters. Soils are mostly loamy and heavy clay type. PH of soils ranges from 5.2 to 8.0. Based on soil test results it is observed that most of the soil of Bhadrak district is acidic. The Solis of district can be divided into following classes.

1. **Alluvial Soil:** It is formed out of silt deposited by flood water. The soil is mostly marked on the river side's of Salandi, Kansabansa, Baitarani, Reba and Kapali. Clay and organic matter are the main contents of this type of soil as it is extremely fertile crops like paddy, sugarcane, jute, pulses, oilseed, vegetables & spices are grown on this soil.
2. **Sandy and Sandy loamy:** The Sandy and Sandy loamy soil is found in a sporadic manner towards the north adjacent to Balasore district. This soil is suitable for cultivation of mustard, mung, biri, groundnut & vegetables.
3. **Saline Soil:** It occurs mostly in the low lying areas near the sea and confined to major parts of Basudevpur, Chandbali, Tihidi & some parts of Dhamnagar block. The PH of this soil ranges from 5.2 to 8.0. This soil contains high percentage of salt and is therefore unsuitable for cultivation. Only when salinity is washed out by sweet water and floods both HYV & some local varieties of paddy are grown. According to local term these soils may be divided into 4 classes in the light of their composition. They are Matala or Clay soil, Dorasa or loamy soils, Balia or Sandy soils and Patu or alluvial soils.

Agro- climatic condition:

Bhadrak district comes under one Agro-climatic zone i.e. North Eastern Coastal Plain. Based on variation in topography, soil types, availability of irrigation and cropping pattern, this district is divided into 3 agro-ecological situations covering several farming situations and need location specific technologies to cater to the needs of the farmers.

Agro-ecological situations

1. Alluvial canal irrigated
2. Low lying and Flood prone
3. Saline soil group

Forests

Bhadrak District has 97.07 square kilometres of forest area out of total geographical area 2505 square kilometres. Mangroves (Bani Pahi) naturally exist along the Bay of Bengal coast starting from Dhamara in South to Chudamani in north over a length of about 35 kilometres and width of 2 kilometres approximately. All these forest are under highly degraded state due to biotic interference. The category wise forest coverage of the district is as follows.

Sl	Type of Forest	Coverage Area (in sq.
1	Reserve Forests	0
2	Demarcated Protected	3.96
3	Un-demarcated Forest	32.98
4	Un classified Forest	0.01
5	Other Revenue Forests	60.12
Total		97.07

2.6 River System:

All the rivers have their source inside the State and thus they are midstreams and shortstreams. The main Rivers of the District are 1) Baitarani, 2) Salandi, 3) Gamei, 4) Kansbans, 5) Mantei, 6) Kochila, 7) Genguti, 8) Reba, 9) Kapali. The river system in the District is classified mainly into two categories i.e. (i) Baitarini River System & (ii) Salandi River System. The main distributary rivers of Baitarini are Genguti & Kochila but Reba, Kapali & Mantei are the tributaries of Salandi.

Baitarani

It rises among the hills in the north-west of Kendujhar District and enters Balasores near the village Balipur. After flowing in a winding easterly course across the delta where it marks the boundary line between Cuttack and Baleshwar it passes by Chandbali and joins its water with the Brahmani. After their confluence the united stream is named Dhamara which meets the sea after 8.05 KM. It is navigable as far as Olekh, 24.15 KM from its mouth but beyond this point, it is not affected by the tide and is fordable during the hot season. The river is subject to annual heavy floods which travel inland to an average distance of 6.44 KM to 19.32 KM, when it causes considerable damage to the standing crop. A large weir has been constructed across the stream at Akhuapada in order to dam the water during the dry season and supply water to the High Level Canal between that place and Bhadrak.

The river is identified as the Styx of Hindu mythology but the name is possibly a corruption of Avitarini meaning difficult to cross. A legend relates that Lord Rama when marching to Lanka to rescue his wife Sita halted on its bank on the boarder of Kendujhar and in commemoration of this event large number of people visits the river every year in January.

Kochila

This is a distributary of river Baitarani and bifurcated from the main river at Ramarakul under Dhamanagar Block and after running a length of 10 KMs it merges with river Baitarani at Gandhighat sashan near saanlpur village under Dhamanagar block.

Genguti

This a distributary of river Baitarani and is bifurcated from the main river near Anandpur under Keonjhar district and after crossing Dhamanagar and Tihidi Block it merges with river Salandi at Nandpur under Chandabali block.

Reba

Its origin is in Keonjhar District from a place called Muduli Pada in Hatadihi Block and after running a length of 76.85 KMs through Bonth and Bhadrak block of this District it merges with Genguti River at Bhatasahi under Dhamanagar Block.

Kapali

This river is originated from Palasa under Bonth Block and after running a length of 67.30 KMs through Bonth and Bhadrak of this district Block falls into Reba river at Kasimpur under Dhamanagar Block.

Salandi

The Salandi possibly a corruption of Sal Nadi takes its name from the Salforest through which it traverses. It rises on the southern slope of the Meghasani Mountain of Mayurbhanj and throughout its upper course is a black-water river with high banks and a bottom of muddy sand. In January, it scarcely exceeds anywhere one metre in depth. Luxuriant vegetation clothes its banks which at places rise almost to the dignity of cliffs and for kilometers, the river runs through continuous groves of mangoes, palms and bamboos. It has no tide but it is navigable for country boats as high as 9.66 KM (6 miles) from its junction with the Baitarani.

Its lower course breaks up into a network of channels which are interlaced with those of the Mantei. Among its tributaries mention may be made of the Raba which joins it before it meets the Baitarani.

Nalia

It is a distributor of Salandi River and is bifurcated from the main river at vill Durgapur under Bhadrak Block and after running a length of 18.5 KMs it merges with salandi at Baro under Tihidi Block.

Mantei

The Mantei brings down the drainage of the country between the Kansbans and the Salandi and after a tortuous course over a muddy bed and between densely wooded banks, enters the Dhamara near its mouth. This river attains a considerable volume at Charbatia, where it is joined by the Coast canal. It is tidal as far as Rukunadeipur, 12.88 KM east of Bhadrak and is navigable up to that point by country boats.

Gamei

The southern branch of the Kansbans receives the name of Gamei and falls into the sea 9.66 KM south of the latter. Due to the Coast Canal, the river has been silted up with its passage to the sea almost closed. About 4.83 k.m from its mouth is situated the old port of Chudamani, once an important centre of export trade but now an insignificant village. Like the Kansbans, the Gamei is liable to heavy floods but a great part of its flood water runs south-westwards along the old Churaman or Ricketts Canal into the Mantei which drains the country east of Bhadrak.

rainfall in respect of Chandabali block is received from rain gauge station at IMD office located at Chandabali. The district has no Weather Stations.

CHAPTER- 3

HAZARD, VULNERABILITY AND RISK ASSESSMENT

Among the major disasters the District has faced over last 10 years' flood is most frequent and devastating. The District has faced 8 floods in last 10 years which has lead to death of 53 persons and loss of infrastructure, livestock and crop. Major floods in Bhadrak district occur due to heavy rainfall in catchments of Baitarani River, heavy siltation, absence of embankments and sometime poor discharge of flood water in to the sea which leads to breach of embankments. Though the District has not faced any major cyclone over the period of last 10 years, the entire District is highly vulnerable to cyclone as the entire district is coming wind very high damage risk Zone-B (Vb-50 m/s) and its presence in east coast of Bay of Bengal. The proneness of District to cyclone can be witnessed from severe damage caused by 1999 cyclone to all ULBs and villages. Among other disasters to which district are vulnerable are drought, heat wave, Tsunami, Thunder Storm/Lightening, snake bite, drowning and fire accident. The District has faced 3 droughts which lead to loss and damage of 45364.31 hectare of crop area. Around 100 and 22 people have lost their life due to lightening and heat wave respectively in last 10 years. Within last two years, 142 peoples have lost their life due to drowning and 94 have lost their life due to snake bite. 17 numbers of villages of Basudevpur and 24 numbers of villages of Chandbali Block are vulnerable to Tsunami.

Vulnerability Index: To know the relative proneness of 7 blocks to different disasters like Cyclone, Flood and Tsunami, the vulnerability index has been calculated taking physical and socio-economic parameters. The parameters taken for above 3 disasters are different depending on the nature of Disaster. The vulnerability index value in respect of each parameter has been calculated using the following formula.

$$\text{Index Value} = \frac{\text{Actual Value} - \text{Minimum Value}}{\text{Maximum Value} - \text{Minimum Value}} \times 100$$

The individual numeric index value indicates the relative proneness of the Block to the disaster in respect of particular parameter. The average vulnerability index (V) so calculated taking all the index values has been sorted in ascending order to find out the ranking of blocks from maximum to least proneness to the particular disaster.

3.3 Death Analysis Due to Different Disasters

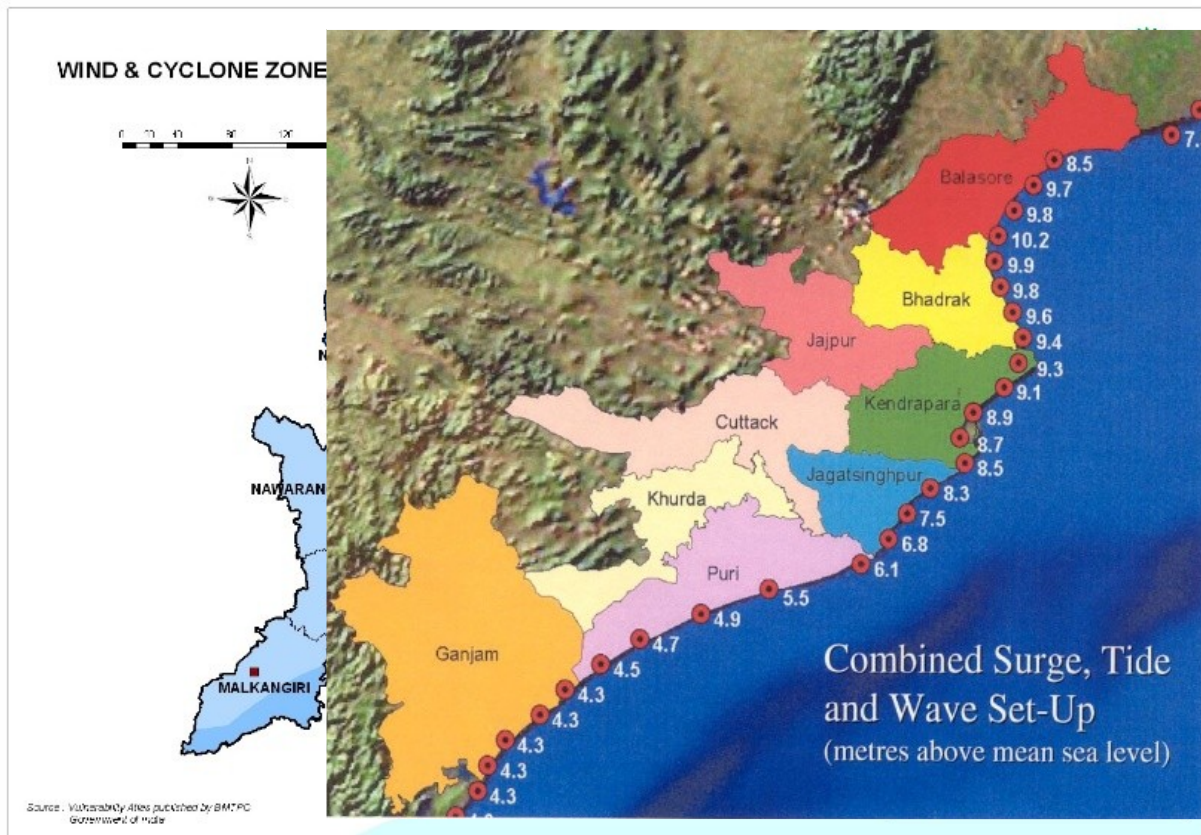

By analysing number of deaths in Bhadrak District during the period 2001 to 2018 due to different disasters, it was found that a total 713 number of people have lost their life due to different disasters. Out of total deaths, 212, 202 and 157 have lost their life due to lightning, drowning and snake bite respectively. In terms of percentage 29.8%, 28.3% and 22.0% of person have lost their life due to lightning, drowning and snake bite respectively.

3.4 Vulnerability and Risk Assessment related to disasters

3.4.1 Cyclone

The East Coast of India is one of the six most cyclone prone areas in the world. Of all severe cyclones that make landfall on the eastern coast, 20% hit Odisha particularly during April-May and September-November. The disturbances which develop in the pre and post monsoon period intensify into severe storms of devastating nature. It is revealed from the past experience that the most vulnerable month for the occurrence of a severe cyclone is October followed by the month of September. Being a coastal District and its presence in the very high damage risk zone according to WIND & CYCLONE ZONES MAP of ODISHA, the entire district is vulnerable to tropical cyclone occurred in Bay of Bengal and Indian Ocean. Heavy rains accompanied with cyclonic storms, however, can cause significant flooding in land, and storm surges can produce extensive coastal flooding up to 40 kilometres from the coastline. So the 41 coastal villages of Basudevpur and Chandabali Block are most vulnerable to disaster like Tsunami and Storm surge. The proneness of the District to cyclone can be witnessed from the damage made by Super Cyclone-1999, Phailin-2013, Hudhud-2014 and Cyclone-Titli-2018. 1356 villages of 166 GPs out of 193 GPS were affected by 1999 Super

Cyclone. 98 cases of human causality, 6 cases of missing person and 77706 numbers of livestock losses were reported during the Super cyclone 2014. 177645 Population affected and 1367 house damage during Cyclone Titli-2018. Total population affected by the different cyclone over the last 10 years is 13, 47,397 with damage of 1, 51,893 houses and 4,557,972 crore estimated value of crop loss. Highly dense populated area with availability of disaster non resilient structure make the district more vulnerable to cyclone. All 1370 revenue villages and the entire infrastructures of the district are vulnerable to Cyclone which requires special mitigation, preparedness, response and reconstruction strategy.

(Detailed list of vulnerable Villages/Wards is at table No. 3.2 of Volume II of the DDMP.)

The vulnerability index of different Blocks has been calculated taking different parameters like average distance of the village from Sea coast, total number of villages, total no. of population, Kachha houses, HHs covered under NFSA, agriculture dependence and livestock population respectively. As per the average vulnerability index, the vulnerability ranking of Blocks has been sorted in an ascending order, which shows Chandabali is most vulnerable and Bhandaripokhari is least vulnerable to cyclone among the seven Blocks of the District.

3.4.2 Tsunami

As Basudevpur and Chandabali BlockS of Bhadrak District are situated in the coast of Bay of Bengal, the villages lying within 1.5 kilometres of coast are considered to be vulnerable to Tsunami. As identified by IMD, 17 nos. of villages of Basudevpur and 24 nos. of villages of Chandabali are vulnerable to Tsunami. As per the scientific study conducted by IIT, Kharagpur, the coastal Districts can be experienced Tsunami within 4 hours, if the Tsunami occurs near Indo-Burman Plate and can be experienced Tsunami within 2 hours, if the

Tsunami occurs near Andaman-Nicobar. The Block and G.P. wise list of villages vulnerable to Tsunami are mentioned in Annexure-IV and in Table No. 3.2 of Volume-II.

In view of very less response time, the entire population and infrastructure in the 41 villages lying within 1.5 KM from coast line are vulnerable to Tsunami, the Block wise vulnerability index has been calculated taking parameters like no. of villages, population and houses likely to be affected by Tsunami. As per the index, Basudevpur block is highly prone to Tsunami followed by Chandabali.

3.4.3 Flood

Among the major disasters the District has faced over last 11 years' flood is most frequent and devastating. The District has faced 9 floods in last 11 years which leads to death of 44 persons and loss of infrastructure, livestock and crop. Major floods in Bhadrak District occur due to heavy rainfall in catchments of Baitarani River, heavy siltation, absence of Embankments and sometimes poor discharge of flood water in to the sea which leads to breach of embankments. Most of the floods occur within 4 months from June to September. As all major rivers in Bhadrak district connected with the small rivers/ Nallah, this aggravate the flood situation. Flood in the River Salandi has considerably reduced after construction of Hadgarh Dam. Dhamanagar, Tihidi, Chandabali and Bhandaripokhari Blocks of the District

are most vulnerable to flood. The catchment area analysis of Akhuapada gauge station as given below is providing clear image of flood vulnerability of the district.

Table No.3.9: Catchment Area Analysis of Akhuapada Gauge Station

Sl.	Area Name	Contribution in Percentage
1	Champua	100%
2	Swamipatana	100%
3	Keonjhar	60%
4	Thakurmunda	30%
5	Anandapur	100%
6	Akhuapada	100%

The 500 mm rainfall in above 6 catchment area will lead to crossing danger of level at Akhuapada, whereas 600 mm rainfall will lead to High Flood. As the travel time of flood water from above catchment areas to Akhuapada is around 12 hours, the district has very less time to respond to floods in case of heavy incessant rainfall.

After construction of new embankments and strengthening of existing embankments in subsequent years, the district is still highly vulnerable to floods due to overtopping of water at 7 escape points as mentioned below.

Table No. 3.10: Name and location of Escape Points

Location of Escape points	Name of River/Embankments
Gourangpur, Sohoda , Dhamnagar	Left embankment of river Baitarani on OAE No. 12(abcd) B
Mallimahara, Sohoda, Dhamnagar	Left embankment of river Baitarani on OAE No. 11(abcd) B

Mathamahara, Khadipada, Dhamnagar	Right embankment of river Genguti on OAE No. 10B
Kankei, Khadipada, Dhamnagar	Right embankment of river Genguti on OAE No. 10B

To understand the flood vulnerability of blocks, we need to have a critical analysis of Escape points with comparison to Gauge level at Akhuapada.

3.7 Land Slide Vulnerability: As the entire district is covered by plane land, no area in the district is vulnerable to Land Slide.

3.8 Lightning: Among all disasters lightning is most uncertain and unexpected. It is very hard to prevent and mitigate the risk of lightning. We can only take preparatory steps to minimize the risk. During last ten years 127 number of deaths have been reported due to lightning.

Year wise details of damage due to lightening is as follows:

3.9 Major Industrial Establishments/ Chemical & Other hazardous material storage points: Though the District has few major industries but they are not storing any hazardous material.

3.10 Drought: As most part of the district does not have proper irrigation facility; agriculture is full dependant on monsoon rainfall. Any scanty rainfall than the normal

rainfall during monsoon will lead to drought like situation. In last 10 years the district has faced 4 droughts. The Block wise drought affected crop area is mentioned at Volume-II.

3.11 Drinking Water Crisis: Being a coastal district, ground water is available at a very low depth from the ground. So district has no major drinking water crisis.

3.12 Railway Line Exposed Different Hazards

The district has 35.82 Kilometres of Railway lines and 6 stations in the district. As this line connected Vishakapatnam in south to Kolkata in east, the movement of trains are very frequent. As most of the railway line are in Bhadrak, Bonth and Bhandaripokharo block, these are not vulnerable any Hazard.

4.20 Coordination structure at the District level and down the line

Figure No.4.6: Coordination structure at the District level and down the line

4.21 GO-NGO Coordination before and after disaster in the district

The DM Act 2005 recognizes that sometimes the development patterns that do not recognize disaster risk and vulnerability in the specific geographic areas may induce disasters. The proactive approach in the DM Act 2005 to address disaster risk and vulnerability through pre-disaster preparedness and mitigation activities also envisage accountability and multi stakeholder participation, including coordination of the activities of the NGOs at various levels. Sections 30 (2) (xix) of the Act authorized the DDMA for collaboration with stakeholder

agencies including NGOs for the purpose of improving the effectiveness of DM. Similarly, the Act mandates NGOs to act in an equitable and non-discriminatory manner for the purpose of assisting or protecting the disaster affected communities or for providing relief to the affected communities or while dealing with any effects of threatening disaster situations and has fixed the responsibility to monitor this on DDMA's vide section 34 (1). The above provisions ensure that the concerned DM interventions being addressed are supported and facilitated by the civil society organizations working at the grass roots and also takes care of the ground realities. Section 30 (2) (xix) of the Act stipulates that the DDMA shall advise, assist and coordinate the activities of the Departments of the Government at the district level, statutory bodies and other governmental and non-governmental organisations in the district engaged in the disaster management. Section 34 (1) lays down that the DDMA shall ensure that the non-governmental organisations carry out their activities in an equitable and non-discriminatory manner.

In the District Bhadrak, there is good GO & NGO Coordination throughout the all type of developmental activities including disaster management. During the previous Disasters, the coordination has resulted speed intervention for relief, rescue and management of disasters. The NGO teams, volunteers, Red Cross members, NCC, NSS and NYK volunteers also joined hands in the activities. A list of NGOs involved in Disaster Management has been prepared by the District Administration & Capacity building programmes have been planned for them. The NGOs and CBOs are also invited to the mock drill programmes and other disaster related programmes conducted district, block and shelter levels.

4.22 Role of Corporate Sector in the district relating to Disaster Management

Globally disaster risk mitigation and management is now taken up as everybody's business. It is increasingly realized that private, or more appropriately, corporate sector cannot remain insulated from either the effects of increasing natural disasters or the responsibilities of reducing the risks of disasters. Corporate sector depends on community at large for sustenance, not only as a source of labour, capital and material but also as a market for products and services.

There are three main ways in which corporate sector contributes to the process of disaster risk reduction:

- Corporate Social Responsibility (CSR) in supporting relief, rehabilitation and risk reduction activities;
- Redefining the business continuity plan to factor in hazards, risks and vulnerabilities;

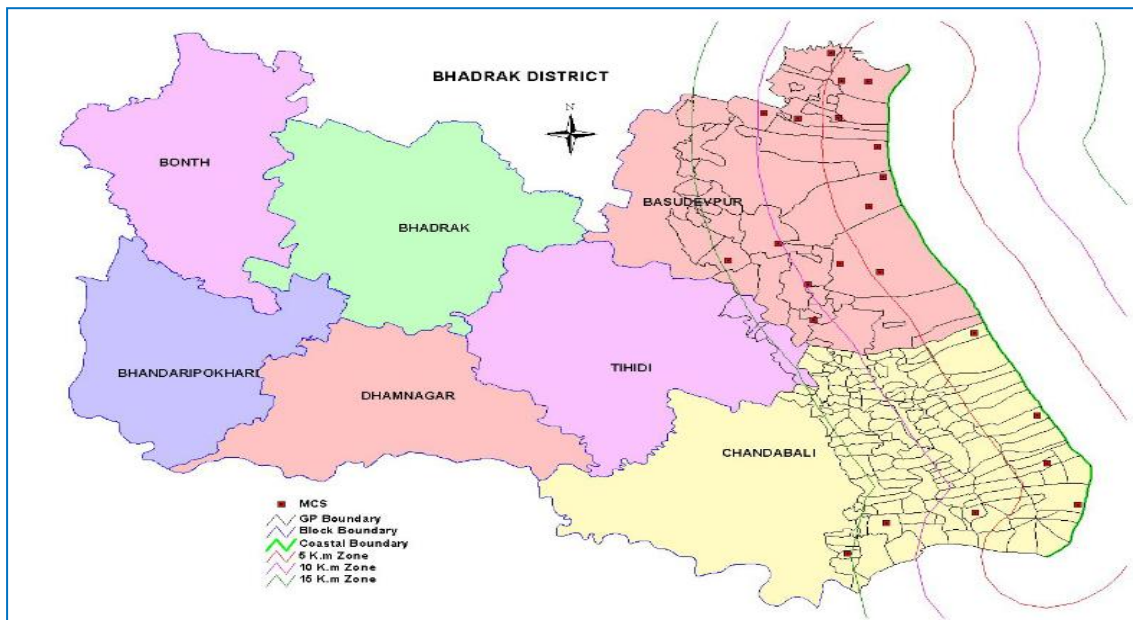

- New business opportunities created in disaster reduction due to the increase in emphasis on risk reduction.
- Inclusion of sustainable development and mainstreaming of disaster management in all activities, projects and processes

PREVENTION & MITIGATION MEASURES

5.1. Ways & Means to prevent or reduce the impact of various disasters

As the disasters are inevitable & unavoidable, the only way is to mitigate its impact is by taking preventive measures. The prevention and mitigation measures can be classified into short term and long term measures. Activities like immediate relief, reducing the response time to avert any losses, provide the vulnerable and affected people with the basic needs; supply of minimum essential items to those who have lost their properties and movables, grant of long/short term loans at a concessional rate falls under the purview of short term measures. The Long Term Measures to be followed include maintenance and repair of the embankments of the rivers and canals going through the district, construction of embankments, bank protection and watershed management, bio-mass production by the forest/horticulture department.

CHAPTER – 6

CLIMATE CHANGE ADAPTATION & MITIGATION

6.1 Climate Change Adaptation & Mitigation

Weather and climate are the results of complex interactions between anthropogenic and natural factors. Evidence of global climate change include higher average temperatures, changes in precipitation, ocean warnings, ocean acidification, sea level rise, decreasing sea ice, and changes in physical and biological systems. Observed climate change can be linked with the increase of green house gas concentrations in the atmosphere since the industrial revolution. Global surface temperature changes for the end of the 21st century is likely to reach 4°C if no drastic mitigation actions are taken. Various sources of climate data exist that can support planning for climate change.

Greenhouse gases (GHGs) are trace gases in the atmosphere that absorb and emit long wave radiation. They naturally blanket the earth and keep it at about 33° C warmer than it would be without these gases in the atmosphere. The table features the seven most important greenhouse gases as regulated under the Kyoto Protocol. The seven gases each have a different capacity to trap heat in the atmosphere, or a so-called “*global warming potential*” (GWP). They all belong to the group of long-lived greenhouse gases (LLGHGs), because they are chemically stable and persist in the atmosphere over time scales of a decade to centuries or longer, so that their emission has a long-term influence on climate. Some of the GHGs occur naturally (e.g. CO₂, CH₄ and N₂O) but increases in their atmospheric concentrations over the last 250 years are due largely to human activities. Other greenhouse gases are entirely the result of human activities (e.g. HFCs, PFCs, SF₆ and NF₃).

Table No.6.1: Details of Greenhouse Gases

Greenhouse Gas	Global Warming Potential (GWP) (over 100 years)	% of Total Anthropogenic GHG Emissions (2010)
Carbon dioxide (CO ₂)	1	76%
Methane (CH ₄)	25	16%
Nitrous oxide (N ₂ O)	298	6%
Hydrofluorocarbons (HFCs)	124-14,800	< 2%
Perfluorocarbons (PFCs)	7,390-12,200	< 2%
Sulphur hexafluoride (SF ₆)	22,800	< 2%
Nitrogen trifluoride (NF ₃)	17,200	< 2%

6.2 Important Greenhouse Gases : Carbon Dioxide (CO₂)

Most important greenhouse gas (contributes ~64% to total radiative forcing by long-lived GHGs). Half of CO₂ emitted by human activities is being absorbed in the biosphere and in the oceans. Rest remains in the atmosphere for hundreds to thousands of years

The most important anthropogenic GHG is carbon dioxide (CO₂). It accounts for around 64% of total radiative forcing due to LLGHGs. Carbon dioxide does not have a specific lifetime because it is continuously cycled between the atmosphere, oceans and land biosphere and its net removal from the atmosphere involves a range of processes with different time scales. CO₂ is primarily emitted as a result of burning of fossil fuels, deforestation and forest degradation and iron and steel production. Oceans and forests are the main sequesters of carbon i.e. sinks that can absorb CO₂ from the atmosphere. Carbon dioxide is the gas to which all other gases are compared when speaking of Global Warming Potential. Emissions of other greenhouse gases can be converted into CO₂ equivalent emissions.

Sl. No	Name of the Industry/ Plant/ Firm	Location	Quantity of Co2 emission (PPM)	Ranking as per CO2 Emission (in the district)	Other major pollutants emitted (PPM)	Action taken for cutting down emission

6.3 Important Greenhouse Gases : Methane (CH₄)

Second most significant greenhouse gas (contributes ~18% to total radiative forcing by long-lived GHGs). Approximately 40% of methane is emitted into the atmosphere by natural sources. About 60% comes from human activities & Stays in the atmosphere for approximately 12 years.

The second most significant anthropogenic GHG is methane (CH₄) which contributes to approximately 18% of total radiative forcing due to LLGHGs. Approximately 40% of methane is emitted into the atmosphere by natural sources (e.g. wetlands and termites). About 60% comes from human activities (e.g. cattle breeding, rice agriculture, fossil fuel exploitation, landfills and biomass burning). Methane is mostly removed from the atmosphere by chemical reactions, persisting for about 12 years. Thus although methane is an important greenhouse gas, its effect is relatively short-lived.

Table No.6.3: Industry and location wise Methane (CH₄) emission

Sl. No.	Name of the Block	Major Sources	Annual emission (In PPM)	Ranking as per CH ₄ Emission (PPM)	Action taken for cutting down emission

6.4 Important Greenhouse Gases : Nitrous Oxide(N₂O)

The third most significant greenhouse gas (contributes ~6% to total radiative forcing by long-lived GHGs). Stays in the atmosphere for approximately 114 years. Nitrous oxide is emitted into the atmosphere from both natural (about 60%) and anthropogenic sources (approximately 40%).

Nitrous oxide is the third most significant GHG, contributing to about 6% of radiative forcing due to LLGHGs. The primary human sources of N₂O are fertilizer production and use in agriculture and various industrial processes. It is estimated that N₂O stays in the atmosphere for an estimated 114 years. Its impact on climate, over a 100-year period, is 298 times greater than equal emissions of carbon dioxide. It also plays an important role in the destruction of the stratospheric ozone layer which protects us from the harmful ultraviolet rays of the sun.

Sl. No.	Name of the Block	Fertiliser /Industrial processes	Annual Usage (In tonnes)	Ranking as per N ₂ O Emission (PPM)	Other major pollutants emitted (PPM)	Action taken for cutting down emission

6.5 Important Greenhouse Gases : Fluorinated Gases

Global warming effect up to 23,000 times greater than carbon dioxide. Stay in the atmosphere up to 50,000 years. Three main groups: hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulphur hexafluoride (SF₆). Mainly developed as substitutes for ozone-depleting substances

Fluorinated gases are a family of man-made gases used in a range of industrial applications. Sources include refrigerants, air-conditioning, solvents, aluminium and magnesium production, etc. Many fluorinated gases have very high global warming potentials (GWPs) relative to other greenhouse gases. That means small atmospheric concentrations can have large effects on global temperatures. They can also have long

atmospheric lifetimes, in some cases, lasting thousands of years. Fluorinated gases are removed from the atmosphere only when they are destroyed by sunlight in the far upper atmosphere. In general, fluorinated gases are the most potent and longest lasting type of greenhouse gases emitted by human activities. There are three main categories of fluorinated gases: hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulphur hexafluoride (SF₆).

- Hydrofluorocarbons (HFCs) are the most common group of *F-gases*. They are used in various sectors and applications, such as refrigerants in refrigeration, air-conditioning and heat pump equipment; as blowing agents for foams; as solvents; and in fire extinguishers and aerosol sprays.
- Perfluorocarbons (PFCs) are typically used in the electronics sector (for example for plasma cleaning of silicon wafers) as well as in the cosmetic and pharmaceutical industry. In the past PFCs were also used in fire extinguishers and can still be found in older fire protection systems.
- Sulphur hexafluoride (SF₆) is used mainly as an insulating gas, in high voltage switchgear and in the production of magnesium and aluminium.

Table No. 6.5: Industry and location wise Fluorinated Gases emission

Sl. No.	Name of the Industry/Firm/Plant	location	Annual emission (In PPM)	Ranking as per fluorinated gas Emission (PPM)	Action taken for cutting down emission

6.6 Important Green House Gases : Chlorofluorocarbons (CFCs)

Chlorofluorocarbons (CFCs) an important Green House Gas contribute about 12% to radiative forcing by long-lived GHGs has not been included in the Kyoto Protocol because they are already regulated under the Montreal Protocol on Substances that Deplete the Ozone Layer which entered into force in 1989. The Montreal Protocol includes, for example, chlorofluorocarbons (CFCs) which contribute about 12% to total radiative forcing by LLGHGs. CFCs can stay in the atmosphere for more than 1,000 years. CFCs have a global warming potential (GWP) that ranges between 4,750 and 14,400 (over 100 years' time span). CFCs are used in the manufacture of aerosol sprays, blowing agents for foams and packing materials, as solvents, and as refrigerants.

6.7 Green House Gas Sequestration

In order to prevent dangerous anthropogenic interference with the climate system, actions need to be taken to stabilize greenhouse gas concentrations in the atmosphere. Such actions are referred to as “climate change mitigation”. More specifically, climate Change mitigation involves:

- reducing GHG emissions, e.g. by making older equipment more energy efficient;
- preventing new GHG emissions to be released in the atmosphere, e.g. by avoiding the construction of new emission-intensive factories;
- preserving and enhancing sinks and reservoirs of GHGs, e.g. by protecting natural carbon sinks like forests and oceans, or creating new sinks (“carbon sequestration”).

The global community has committed itself to hold warming below 2°C (compared to pre-industrial temperatures) to prevent dangerous climate change. The 2013 IPCC report on the physical science basis of climate change provides a “budget approach” to this goal, looking at total allowable CO₂ emissions level to meet the 2°C target. The report states that in order to have a greater than two in three chance of keeping *global warming* below 2°C, cumulative emissions of CO₂ cannot exceed 1,000 Gigatonnes of carbon (GtC). As of 2011, more than half this amount, or over 500 GtC, has already been emitted since 1861-1880. When the effects of other greenhouse gases are included, even less CO₂ could be emitted to keep below a 2°C warming.

Current annual emission levels are at 9.5 GtC and are likely to grow every year due to population growth and economic development patterns. If annual emissions continue to grow as in past years (“business as usual” scenario) the carbon budget will be exhausted in the next three decades.

7.2 Guidelines on School Safety Policy, 2016- NDMA

The School Safety encompasses “the creation of safe environments for children starting from their homes to their schools and back.” This as well includes safety from large-scale natural hazards, human made risks, pandemics, violence as well as more frequent and smaller-scale fires, transportation and other related emergencies and environmental threats that can adversely affect the lives of children.

Vision:

- The Guidelines stand for a vision of India where all children and their teachers, and other stakeholders in the school community are safe from any kind of preventable risks that may threaten their wellbeing during the pursuit of education.
- Educational continuity is maintained/ resumed even in the immediate aftermath of a disaster so that Children are physically, mentally and emotionally secure within their schools.

Approach and Objectives

- All hazard approach.
- All schools; all stakeholders 2. Strengthening existing policy provisions to make schools safer
- School Safety as an indicator of quality for continued planning, execution and monitoring
- Primary objective is to ensure the creation of safe learning environment for children.
- Also seek to highlight specific actions towards school safety that can be undertaken by different stakeholders within the existing framework of delivery of education.

Applicability

- The National School Safety Policy Guidelines apply to all schools in the country- whether government, aided or private, irrespective of their location in rural or urban areas.
- They apply to all stakeholders involved in delivery of education to Children in India

All hazard approach

- School Safety efforts needs to take cognizance of all kinds of hazards that may affect the wellbeing of children.
- Hazards include structural and non-structural factors.
- Structural factors include dilapidated buildings, poorly designed structures, faulty construction, poorly maintained infrastructure, loose building elements, etc.
- Non Structural factors include loosely placed heavy objects such as almirahs, infestation of the campus by snakes and any other pests, broken or no boundary walls, uneven flooring, blocked evacuation routes, poorly designed and placed furniture that may cause accidents and injury, inadequate sanitation facilities, etc.

Right to Education Act 2009

- The Act sets minimum norms and standards with regard to location and quality of schools and in Clause 19, lays down that no school shall be established, or recognized unless it fulfills the norms and standards specified in the schedule.
- One of the key standards is in relation to access to “all weather buildings”; in “areas with difficult terrain, risk of landslides, floods, lack of roads and in general, danger for young children in the approach...”
- the State Government / Local Authority shall locate the school in such a manner as to avoid such dangers”.
- The Act lays down the formation of the School Management Committee for planning of infrastructure and other requirements with respect to operational functioning of schools.
- The School Development Plan, as laid out by the Act, spells out the physical requirements of additional infrastructure and equipments to meet the norms spelt out in the schedule (in relation to all weather buildings).

Key Action Areas

In first phase 77 High Schools as old as 50 to 100 years have been selected for preparation of School Safety Plan. For the purpose, a think tank consisting of Collector, ADM, Emergency Officer, DPC, SSA, DWO, RTO, Nominated Staffs from DPC Office, Nominated Staffs from District Child Protection Unit and DPO (OSDMA) has been formed to develop a comprehensive format for the Plan in line with the Model Template provided by NDMA. In consultation with the members of think tank, the format for School Safety Plan has already been finalized. The members of think tank will function as district level Resource Person (RP) for Training of Trainers (ToT) who will subsequently impart training at Block level to Focal Point Teachers of above 77 selected High Schools and provide hand holding support for preparation of School Safety Plan.

CHAPTER-8

CAPACITY BUILDING MEASURES

8.1 Approach

Developing a DDMP without building capacity or raising awareness amongst stakeholders can be detrimental to the development of a successful and sustainable plan. Stakeholders and communities are critical components to a successful, long-term, sustainable disaster management plan. Capacity Building develops and strengthens skills, competencies and abilities of both Government and non-government officials and communities to achieve their desired results during and after disasters, as well as preventing hazardous events from becoming disasters.

Developing institutional capacity is very important. At the same time, by making the local community part of the process and solution would help in ensuring that disaster mitigation measures are more likely to be implemented and maintained over time.

8.2 Capacity Building of Govt. Officials, PRI Members etc.

[Note: a training strategy should be formulated for training of major government and non-governmental cadres in the district who can aid in disaster management. Programmes to be finalized by the district based on need and requirement.]

Districts to first utilize the funds available under different schemes at the district level, for capacity building activities. Besides, funds are also available under State Disaster Response Fund (SDRF). District Administration to prepare the Capacity Building plan for the district and send the same with detailed budget to SDMA for necessary funding.]

9.14 Tsunami Preparedness Through EWDS

Odisha, which has been devastated by the super cyclone in 1999, has now been identified as one of the Tsunami prone state. The Tsunami travel time atlas, published by IIT, Kharagpur, has identified Odisha coast to be prone to Tsunami. 328 villages situated within 1.5 km of the coastline in six coastal districts have been identified as Tsunami prone.

The district wise number of Blocks/ Gram Panchayats/ Villages of Odisha prone to Tsunami is given in following table.

Name of the District	Block	GP	Village
Balasore	5	29	63
Bhadrak	2	13	41

District Disaster Management Plan-2019

Unlike Cyclone & Flood, in case of Tsunami, we will get only 2 hours to respond if the Tsunamigenic Earthquakes occurring close to the Andaman & Nicobar Islands and 3-4 hours to respond if the Tsunamigenic Earthquakes occurring close to the Sumatra Islands.

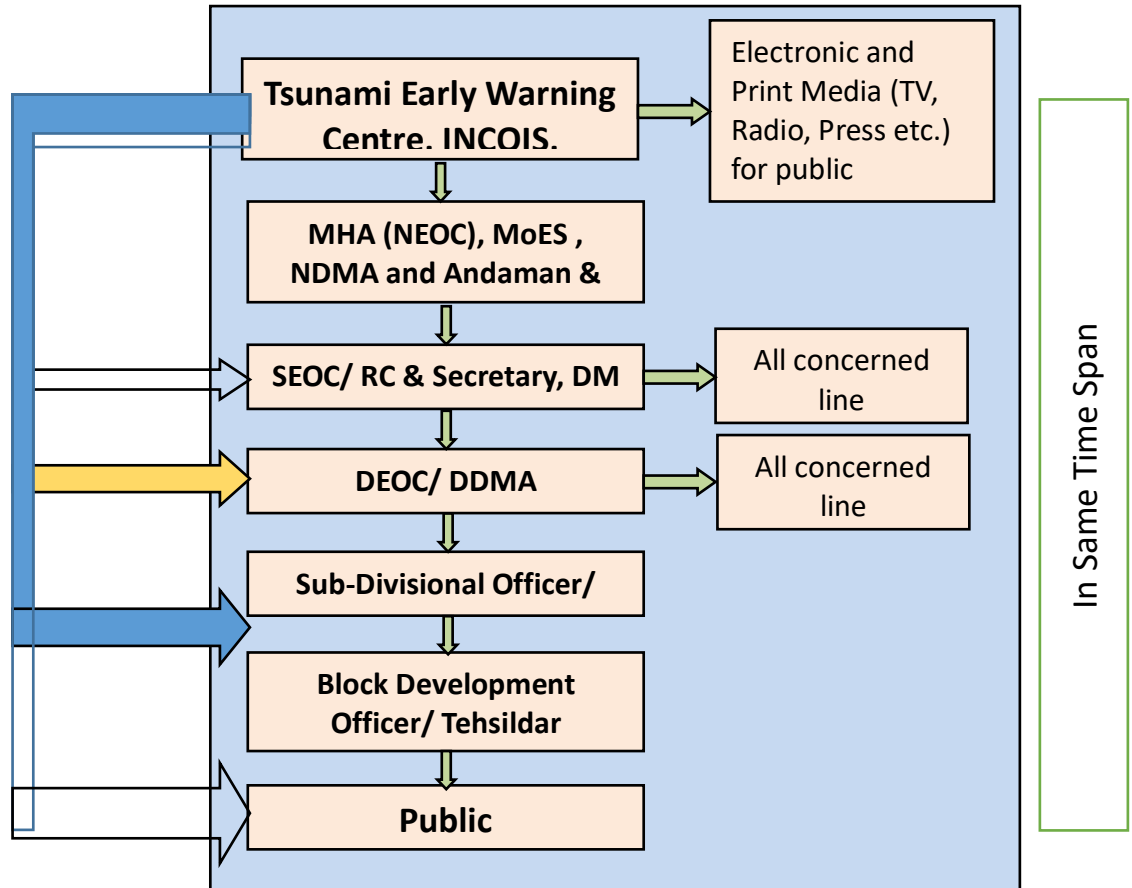

In view of very short period of time to respond, we need to have full proof and robust communication system to address the existing gap of disseminating of Tsunami warning up to the community level. To address the issue, Early Warning Dissemination System (EWDS) for the coastal districts of Odisha is being implemented under component-A of the World Bank assisted National Cyclone Risk Mitigation Project (NCRMP). The project is being implemented in 22 coastal blocks under 6 coastal districts (Balasore, Bhadrak, Kendrapara, Jagatsinghpur, Puri & Ganjam) of the state. The last Mile Connectivity aims at information dissemination from the Centre, State, Districts and Block levels to communities and vice versa, ensuring that the last man living nearest to the sea is well informed of actions to take in case of an upcoming Tsunami.

The EWDS comprises of the technologies namely Mass Messaging and Alert Tower Siren System for early warning dissemination before arrival of Cyclone/ Tsunami i.e. Pre disaster scenario. Technologies such as Digital Mobile Radio (DMR) and Satellite- based Mobile Data/Voice terminals (SBMDV) which are suitable for both Pre, During and Post Disaster Scenario as well. Besides this, the project aims at Strengthening of State Emergency Operation Centre (SEOC), District Emergency Operation Centre (DEOC), and Block Emergency Operation Centre (BEOC). The other features of the EWDS are as follows.

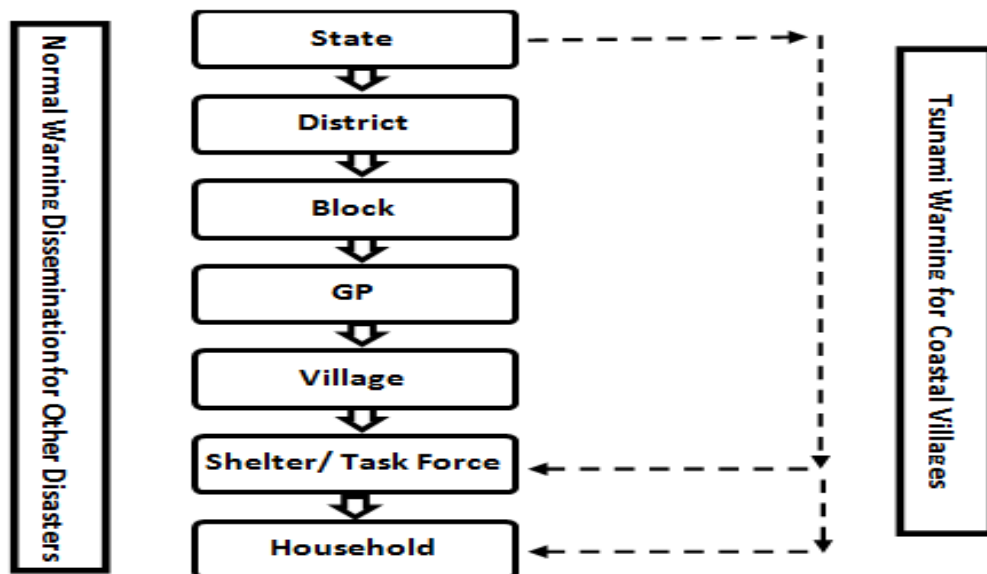

- 1205 villages in 22 coastal blocks within 5 KM from coastline are covered
- Satellite based mobile data voice terminals at SEOC and 6 DEOCs
- DMR connectivity to SEOC, 6 DEOCs, 22 BEOCs and 14 Fish Landing Centres (FLCs)
- Alert Towers at 122 locations within 1.5 KM from the coastline for both Cyclone and Tsunami warning dissemination
- Mass Messaging from SEOC for Cyclone & Tsunami warning

The Indian Tsunami Early Warning System (ITEWS) at the Indian National Centre for Ocean Information Services (INCOIS), Hyderabad is responsible for detection of seismic wave, determination of magnitude and hypocenter, Evaluation of Tsunami and Issuance of Tsunami Bulletin (Warning/Alert/Watch/Adv). Tsunami information flow and Dissemination chain through the above EWDS platform is mentioned below.

For Tsunami Warning dissemination, DMR connectivity has been installed at DEOC, BEOC of Basudevpur & Chandabali Block and 2 Fish Landing Centres at Dhamara of Chandabali and Chudamani of Basudevpur Block. Apart from above one repeater station has been installed at Dhusuri GP of Dhamnagar block. For warning dissemination to the last mile, alert towers have been installed at the following locations.

CHAPTER-10

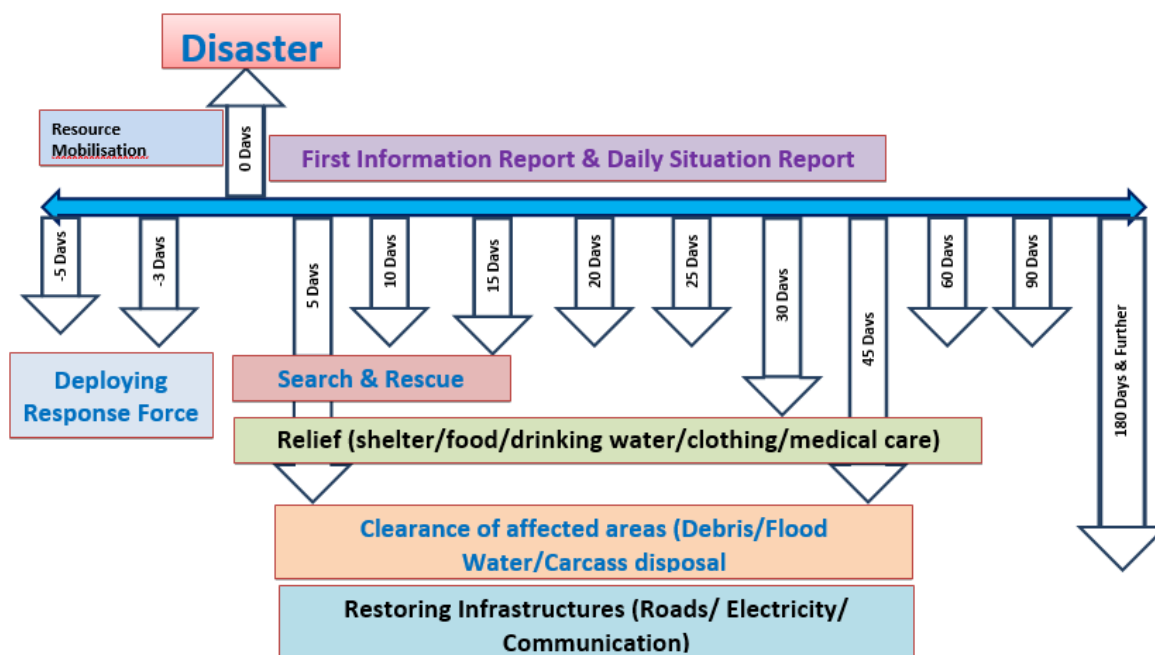

RESPONSE

Response refers to activities done for handling disaster to bring the situation to normalcy not exceeding fifteen days from the abatement of disaster. The onset of an emergency creates the need for time sensitive actions to save life and property, reduce hardships and suffering, and restore essential life support and community systems, to mitigate further damage or loss and provide the foundation for subsequent recovery. Effective response planning requires realistic identification of likely response functions, assignment of specific tasks to individual response agencies, identification of equipment, supplies and personnel required by the response agencies for performing the assigned tasks. A response plan essentially outlines the strategy and resources needed for search and rescue, evacuation, etc.

10.7 Disposal of Carcasses of Animals

Methods: 1. By Burning the Carcasses 2. By Deep Burial Method

As the burning of carcasses is cost effective generally the 2nd method i.e. the Deep Burial Method is generally adopted conveniently.

Disposal of Carcasses by Deep Burial Method:

Selection of Site: Selection and maintenance of a burial site is very important for example, areas with sandy or gravelly soil and a shallow groundwater table must not be used as burial sites. The bottom of the disposal trench must be 4 feet above any permanent water table and the trench must be a minimum horizontal distance of 200 feet from the nearest surface water. Also the disposal site should be away from any residence, drinking water well, shallow aquifers or areas that may be flooded.

Requirements: for one adult large size cattle/buffalo carcass

- I. In this method a pit is to be dug with 6 ft. depth X 4 -6 ft. length X 5 ft. width (approx.) depending on size of the carcass.
- II. Lime - One gunny bag lime 20-25 kg (approx.).
- III. Bleaching powder (Chlorinated Calcium Carbonate)-5 kg (approx.) is usually used for disinfection.
- IV. Common salt (NaCl) -10 kg (approx.) are used for putrefaction of the carcass.

Procedure: After digging the pit a layer of bleaching powder and lime is given and the carcass is placed over it and then common salt about 5-8 kg are sprinkled on carcass followed by layer of bleaching powder and lime as alternate layer. Minimum 2 ft. soil is covered to close the pit in a compact manner. Some heavy objects like stone or wood log etc. are covered above the pit in order to avoid digging of carcass by predator animals. At least 4 to 6 months are allowed for complete decomposition of carcass and complete arrest of contamination of microorganism. For more no of carcasses and large size pits JCB machine may be used for the purpose conveniently.

REHABILITATION & RESTORATION

Rehabilitation and restoration comes under recovery phase immediately after relief and rescue operation of the disaster. This post disaster phase continues until the life of the affected people comes to normal. This phase mainly covers damage assessment, disposal of debris, disbursement of assistance for houses, formulation of assistance packages, monitoring and review, cases of non-starters, rejected cases, non-occupancy of houses, relocation, town planning and development plans, awareness and capacity building, housing insurance, grievance redress and social rehabilitation etc.

The district is the primary level with requisite resources to respond to any natural calamity, through the issue of essential commodities, group assistance to the affected people, damage assessment and administering appropriate rehabilitation and restoration measures.

The District Disaster Management Authority reviews the relief measures submit financial requisition to the state Govt. under SDRF & NDRF. The requisition must reach the SDMA & SRC office in the prescribed format as detailed below for smooth & quick processing.

CHAPTER-12

RECOVERY

A series of long term activities framed to improve upon the repaired activities in the Reconstruction & rehabilitation phase are covered under Recovery phase. Recovery includes all aspects of mitigation and also incorporates the continuation of the enabling process, which assists the affected persons and their families not only to overcome their losses, but also to achieve a proper and effective way to continue various functions of their lives. The Recovery process is therefore a long-terms process in which everyone has a role – the Government including the PRI members, NGOs and especially the affected people, their families and the community.

- Preparation of Recovery plan for displaced population, vulnerable groups, environment, livelihoods
- Organise initial and subsequent technical assessments of disaster affected areas and determine the extent of recovery works necessitated in addition to reconstruction & rehabilitation works.
- Evaluate the extent of works under SDRF/NDRF & other sources (damaged infrastructures)
- Explore opportunities for external aids like (International Agencies / Civil Society / Corporate Sector)
- Allocate funds for the stabilisation of the repaired & reconstructed infrastructure.
- Integrate Climate change & Disaster Risk Reduction features in the recovery programmes

The DM & Collector will be the co-ordinator of all Recovery activities in the District. The role of the DM & Collector will be to:

- Generally, monitor the management of the recovery process;
- Ensure implementation of the recovery plan by line departments, blocks
- Effective service delivery minimising overlap and duplication;

CHAPTER- 13

FINANCIAL ARRANGEMENT

13.1 National Disaster Response Fund (NDRF)

The National Disaster Response Fund (NDRF) has been constituted by the Government of India as per the sub-sections (1) of section (46) of Disaster Management Act, 2005 and recommendation of the 13th Finance Commission. NDRF has been constituted by replacing the National Calamity Contingency Fund (NCCF). It is administered by the National Executive Committee (NEC).

In the event of a calamity of a severe nature when the State Disaster Response Fund (SDRF) is insufficient to meet the relief requirements, additional central assistance is provided from NDRF, after following the laid down procedure. The State Government is required to submit a memorandum indicating the sector-wise damage and requirement of funds. On receipt of memorandum from the State,

- An Inter-Ministerial Central Team is constituted and deputed for an on the spot assessment of damage and requirement of funds for relief operations, as per the extant items ad norms.
- The report of the Central Team is considered by the Inter-Ministerial Group (IMG) / A Sub-committee NEC constituted under section 8 of DM act, 2005, headed by the Home Secretary.
- Thereafter, the High Level Committee (HLC) comprising of the Finance Minister, the Agriculture Minister, the Home Minister and the Deputy Chairman, Niti Ayog considers the request of the State Government based on the report of the Central Team recommendation of the IMG thereon, extant norms of assistance and approves the quantum of assistance form NDRF.
- This is, however, subject to the adjustment of 75% of the balance available in the State's SDRF for the instant Calamity.

(Please refer page no. 520 of Volume-II for NDRF Items and Norms)

13.2 State Disaster Response Fund (SDRF)

As per the provisions of Disaster Management Act, 2005 sub-section (1)(a) of Section (48) and based on the recommendation of the 13th Finance Commission, the Government of Odisha has constituted the State Disaster Response Fund (SDRF) replacing the Calamity Relief Fund (CRF). The amount of corpus of the SDRF determined by the 13th Finance

Commission for each year the Finance Commission period 2010-15 has been approved by the Central Government. The Central Government contributes 75% of the said fund. The balance 25% matching share of contribution is given by the State Government. The share of the Central Government in SDRF is released to the State in 2 installments in June and December respectively in each financial year. Likewise, the State Government transfers its contribution of 25% to the SDRF in two installments in June and December of the same year.

Ministry of Home Affairs, upon being satisfied that exigencies of a particular calamity so warrant, may recommend an earlier release of the Central share up to 25% of the funds due to the State in the following year. This release will be adjusted against the installments of the subsequent year.

As per the Guidelines on Constitution and Administration of the State Disaster Response Fund (SDRF) laid down by the Ministry of Home Affairs, Government of India, the SDRF shall be used only for meeting the expenditure for providing immediate relief to the victims of cyclone, drought, earthquake, fire, flood, tsunami, hailstorm, landslide, avalanche, cloud burst and pest attack. The State Executive Committee (SEC) headed by the Chief Secretary SEC decides on all matters connected with the financing of the relief expenditure of immediate nature from SDRF.

(Please refer page no. 525 of Volume-II for SDRF Items and Norms)

13.6 Central and State Government programmes and Schemes on Natural Calamities

Mainstreaming Disaster Management in development planning is the most critical component to mitigate disaster risks. That's why it's important to make note of financial resources which are used in the implementation of such programmes and schemes which can lessen the risk from disasters by reducing vulnerability. It is also crucial to build communities resilience to deal with them. Moreover, as mandated by Ministry of Finance & Ministry of Home Affairs on 01st and 03rd June, 2014 respectively, 10 % flexi-fund within the centrally sponsored schemes (CSS) to be utilized, inter alia for mitigation / restoration activities in the event of natural calamities in the sector covered by CSS. Thus, relevant Central Government and State

Government funded schemes are identified which are crucial to build over resilience of communities in the context of the district.

Table-13.1: Different State and Central Government Schemes and Programms

13.7 Roles of District Planning Committee on financial outlay on mainstreaming Disaster Risk Reduction (DRR) in development programmes

District Planning Committee being at the top of the pivot for planning of all programmes and activities of entire district it is responsible to ensure mainstreaming and convergence of Disaster Risk reduction in other development programmes. It needs to fully incorporate DRR into relief, development policy and normal & institutionalized practice. The major development projects like MGNREGS, PMAY, PMGSY, NRHM, SSA, National Rural Drinking Water Programme & Swachh Bharat Abhiyan should have DRR component within the projects itself. All the development programmes and projects should consider disaster risk audit and risk reduction measures. It is the District Planning Committee to make sure that Development programmes and projects should not inadvertently increase vulnerability to disaster. In other way Disaster relief and rehabilitation programmes and projects should contribute to developmental aims and to reduce future disaster risk. During financial allocation, mainstreaming of DRR in development projects should be taken care of. District Planning Committee should conduct Project appraisal through DRR lens and Monitor the projects to review DRR actions/ components.

13.8 Fund provision for disaster preparedness & capacity building

Preparedness and capacity building are two major components of disaster management cycle. As compared to other components i.e. Response, Recovery, Rehabilitation and Reconstruction, preparedness is much more in minimising the effects and risks associated with disasters. All the departments should have taken up appropriate preparatory activities before the disaster hit the area because prevention is better than cure. Similarly, various capacity building programmes should be taken up of both officials at all levels and other stakeholders like NGOs, CBOs, Shelter Committee, School & College Students and villagers. With proper awareness and appropriate skills about disaster among all the stakeholders, disaster can be fight away. All most all development projects like MGNREGS, PMAY, PMGSY, NRHM, SSA, National Rural Drinking Water Programme & Swachh Bharat Abhiyan etc. have inbuilt preparedness measures and funds allocated for disaster. Apart from this, funds from SDRF, NDRF, various UN agencies, funding agencies and other development schemes can be utilised for capacity building of stakeholders. Some of schemes have statutory percentage of funds allocated for capacity building. Mock drills are also conducted for capacity building of stakeholders.

CHAPTER 14

PREPARATION AND IMPLEMENTATION OF DISTRICT DISASTER MANAGEMENT PLAN

14.1. Procedure for preparation of DDMP as per the DM act

The District plan shall be prepared by the DDMA, after consultation with the local authorities and having regard to National Plan and the state plan, to be approved by State authority. The District plan shall include:

The district authority shall send a copy of the DDMP to the state authority which shall forward it to the State Government. The District Authority shall, review from time to time, the implementation of the plan and issue such instruction to different Departments of the Government in the District as it may be deemed necessary for implementation thereof.

14.2. Roles of ADM, DEO and Nodal Officers support from other line Departments

ADM being the supervising officer at District level for preparation of DDMP, he coordinates the entire process of data collection from line departments, preparation of DDMP and approval of the same by DDMA. DEO has the responsibility of collection of information and incorporation of same for preparation of DDMP with help of staffs. The nodal officers of line

departments are responsible for collection of data through field level officials and sharing of information with DEO.

14.3 Support of line departments (for providing information)

Preparation of DDMP without support of line department is near impossible. The information of line department is core of DDMP being it an integrated plan. The accurate and timely submission of information enables the DEO to prepare a useful DDMP and its approval in due time.

14.4 Time lines for updating DDMP

Sl. No.	Activities to be done	Timeline
1	Consultation with line department officials and important stakeholders at district level	1 st week of January
2	Submission of base line data by all line departments	3 rd week of January
3	Compilation of information's and preparation DDMP. Sharing of draft with Chairperson, members of DDMA and other stakeholders	1 st week of February
4	Necessary modification and finalization	2 nd week of February
5	Placing the final copy before DDMA, finalization and submission of a copy to SDMA	Last week of February
6	Approval by SDMA	By March

14.5 Details of number of consultation and meetings, discussion with stakeholders

for modification and final sharing: The Consultation meeting with all stakeholders was held on 09th March under the chairmanship of Collector. The process and timeline of preparation of DDMP was discussed with all stakeholders. Each line department was given the format and requested to submit information by 20th March.

14.6 Sharing and placing before DDMA for approval

After the preparation of draft DDMP, it will be shared with all concerned and necessary modification will be done as per suggestions. After necessary modifications, the DDMP will be placed before DDMA for approval. Then the DDMP will be submitted to state authority for approval by state government.

14.7 Implementation of DDMP

The line departments after receiving approved DDMP should plan their activities accordingly with mainstreaming of disaster risk reduction and capacity building. The roles and responsibilities assigned to respective departments should be taken up with true spirit. The preparedness activity through training and capacity building programmes should be finalized with information to district office. All structural measures need to be taken up on a priority basis and completed within the timeline. All structures in vulnerable areas need to be disaster resilient. During implementation of DDMP, participation of community should be taken care of. An integrated approach should be taken up with convergence of works of all concerned departments.

Challenges and Issues related to Drowning, Snake Bite and Lightning:

1. Though, Odisha is one of the leading state in disaster management and most prepared with well set up system for large disasters like Cyclone, Flood and Cyclone, smaller disasters like drowning, snake bite and lightning have taken huge life in recent years.
2. Lack of awareness among the community and specially at individual level about the above 3 disasters
3. Lack of timely and location specific warning system for Lightning and no proper dissemination of warning to the community level

Steps taken by Government:

1. Familiarization Exercise and Community Awareness Programmes are being conducted by NDRF, ODRAF and Fire Team in Schools and Communities with special focus on these disasters.
2. IEC activities have taken up by Govt. through distribution of lighting safety tip posters at all public places, govt. offices and schools & colleges, moving of CRAVAN with audio-visual awareness messages and through electronic medias.
3. Educating the students under School Safety Programme by forming School Safety Advisory Committee and preparation of School Disaster Management Plan.
4. Conducting Mock Drills to create awareness among community about different disasters.

Further Steps Needs to be Taken:

1. Timely and location specific warning system for Lightning and dissemination of message through Massa Messaging System, Electronics Media and Siren System.
2. Display Boards and Posters needs to be installed at high depth areas of ponds and rivers
3. To provide lifebuoy and life jackets to boat owners and ensure that, these are used in boats.
4. Checking of boat transportation to avoid over loading.
5. To take up huge awareness activity among communities and students about snake bite and lightning through wall painting and distribution of leaflets.
6. Provision of Snake Bite Preventing Sticks to farmers.

FOREWORD

Section 31 of Disaster Management (DM) Act 2005 makes it mandatory to have a District Disaster Management Plan (DDMP) for every district. The District Disaster Management Plan-2019 of Bhadrak district was prepared as per the template developed by Odisha State Disaster Management Authority (OSDMA) with necessary support of Blocks, district level line departments and other stakeholders. The DDMP was prepared in two volumes i.e. Volume-I and Volume-II. The Volume-I of DDMP included the detail plan and Volume-II included the Statistical Information, Maps, Contact Numbers, IDRN and Annexure.

Section 31 (4) of the DM Act, 2005 calls for review and updating of the DDMP on annual basis. According to the above provisions of DM Act-2005, a consultation meeting was held on 14 .03 .2019 including all members of DDMA, nodal officers of all key line departments, local authorities and other stakeholders. The DDMP has been subsequently updated taking into active consideration of inputs provided by above members in consultation meeting, changing scenario of occurrences of disasters in the district and lessons learnt during last one year in implementation of DDMP-2018.

As per the guidelines issued by NDMA/SRC from time to time and inputs suggested by OSDMA the DDMP-2019 includes new critical aspects like 1) Schools Safety; 2) Climate Change; 3) Details of Museums, Cultural Heritage Sites and Precincts; 4) Details and Safety measures for Child Care Institutions; 5) embankment details.

Apart from the above aspects, the district has included some district specific aspects like escape point analysis and vulnerability index calculation in respect of cyclone, Flood & Tsunami to find out the relative vulnerability ranking of the blocks in the DDMP-2019.

The revised DDMP-2019 will not only adhere to the legal requirements postulated under the DM Act but also strengthens the institutional mechanism of disaster management in the district. The implementation of DDMP-2019 by concerned stakeholders in true spirit will make a paradigm shift in management of disasters from reactive approach of rescue, relief, recovery and rehabilitation & reconstruction to the pro-active approach of planning, preparedness and prevention.

Collector-cum-Chairperson,
DDMA, Bhadrak

ANNEXURE-II

Figure-6: Government of India Notification on Items and Norms assistance from the SDRF and NDRF

No. 32-7/2014-NDM-I
Government of India
Ministry of Home Affairs
(Disaster Management Division)

‘C’ Wing, 3rd Floor, NDCC- II,
Jai Singh Road, New Delhi-110001,
Dated the 8th April 2015

To

1. Chief Secretaries of all States
2. The Relief Commissioners / Secretaries, Department of Disaster Management of all States

Subject: - Items and Norms of assistance from the State Disaster Response Fund (SDRF) and the National Disaster Response Fund (NDRF) for the period 2015 -- 2020.

Sir/ Madam,

I am directed to state that based on consideration of the recommendations of Fourteenth Finance Commission (FFC) on financing of expenditure on immediate relief during natural disasters for the period 2015-2020 and the report of the Expert Group set up by this Ministry, the Government of India has revised the items and norms for assistance from SDRF/ NDRF. The approved list of items and norms for assistance from SDRF / NDRF in the wake of identified natural disasters is **Annexed**. The revised norms will be effective from 1st April 2015. However, the farmers affected by hailstorms in different parts of the country during February/ March 2015 will also be given assistance under the new norms.

2. The revised items and norms can also be downloaded from website of Disaster Management Division of Ministry of Home Affairs i.e. www.ndmindia.nic.in.

3. As the first charge on SDRF should be on a disaster of severe nature, there has been a requirement to adjust balance amount of SDRF whenever NDRF amount is released. This procedure stands revised as follows:-

50% of SDRF balance, as on 31st March of the preceding financial year, will be adjusted while releasing the assistance from NDRF for the first disaster in a financial year. In case the same State faces another severe disaster during the same year, no adjustment will be made while releasing NDRF assistance.

4. A copy of the communication alongwith their enclosure is also being sent to the Accountants Generals of the States for necessary action.

5. This supersedes this Ministry's earlier letters on this subject, the last being No.32-3/2013-NDM-I dated the 28th November, 2013 and No. 32-3/2013 NDM-I dated 5th March 2014.

Yours faithfully,
